Muhammad Abdullah Akram

[Contact Me](#)

Overview	A modern corporate website built for a Kuwait-based company to establish a polished, professional online presence. Delivered in June 2026, the site focuses on performance, clean visuals, and smooth navigation, and is live for public review.
Tech Stack	React Next.js Tailwind CSS Framer Motion
Key Features	- Full CRUD content management — add, update, and delete images - Full CRUD for blog posts — create, edit, and remove articles - Full CRUD for services listing — add, update, and delete service entries - Multi-language support — the site can be fully translated into Arabic to serve the local Kuwaiti audience - Performance-optimised, responsive layout with smooth page transitions
What Makes It Different	Its standout capability is built-in Arabic language translation support, making the platform accessible to Arabic-speaking users a feature not present in most of the other business-site projects in this portfolio.
Links	GitHub: https://www.github.com/mabdullahchaudhary/alsalam-united Live: alsalamunited.com

Point International

Corporate business website — sister project to Alsalam United

Overview	Built for the same Kuwait-based company and the same business requirements as Alsalam United, but delivered as a distinct design variation. This demonstrates the ability to satisfy identical client requirements through two completely different visual and UX directions.
Tech Stack	Next.js React Tailwind CSS Lenis (smooth scroll) React Router
Key Features	• Full CRUD content management — add, update, and delete images • Full CRUD for blog posts — create, edit, and remove articles • Full CRUD for services listing — add, update, and delete service entries • Multi-language support — Arabic translation available, same as Alsalam United • Smooth-scroll experience powered by Lenis for a more premium feel
What Makes It Different	Same client, same requirements as Alsalam United, yet a fully distinct design language — showcasing design flexibility and the ability to re-skin a proven feature set without duplicating the user experience.

Voice Vista AI

Multi-user AI Receptionist SaaS platform

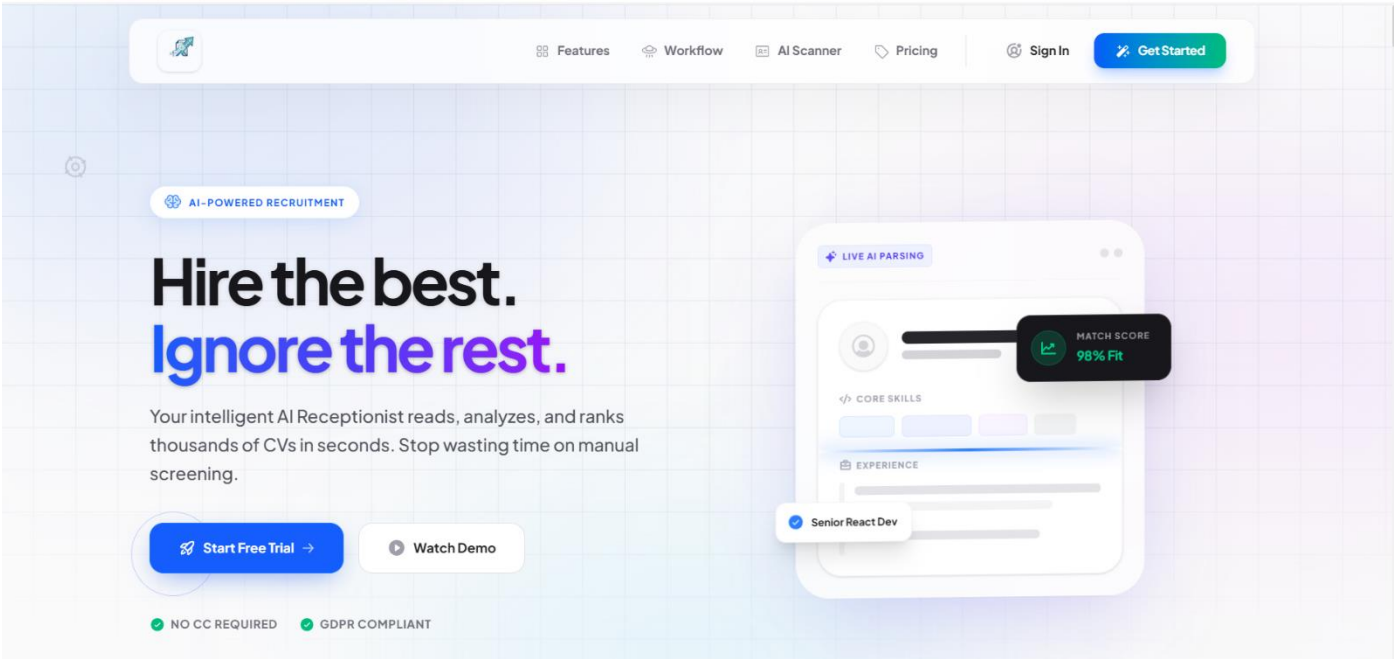

Overview	A full-scale, multi-tenant SaaS product that provides businesses with an AI-powered voice receptionist. This is the most advanced project in the portfolio, combining real-time voice AI, webhook-driven automation, and a complete admin/client management system.
Tech Stack	Next.js 16 React 19 Supabase Clerk Vapi AI Svix Webhooks Framer Motion
Key Features	• Marketing landing page for customer acquisition • Clerk-based authentication flow (sign up, login, session management) • Admin dashboard for managing accounts and configuration • Live Voice Tester to preview the AI receptionist in real time • Real-time call logs for tracking every AI-handled call • AI training pipeline to customise and improve the receptionist's responses • Core-engine vault for securely storing sensitive configuration/credentials • Webhook ingestion system (via Svix) for reliable event delivery • Widget configuration API for embedding the receptionist on client sites • Dynamic language switching • Account cloning powered directly through the Vapi AI API
In Progress	• Multi-tenant client handling • Billing and account settings
What Makes It Different	Unlike every other project in this portfolio, Voice Vista AI is a genuine SaaS product — multi-tenant, subscription-oriented, and built around a real-time voice AI engine with webhook infrastructure, an AI training pipeline, and API-driven account cloning.

AI Recruitment

Automated AI recruitment & CV screening platform

Overview	An AI-driven recruitment automation tool where candidates upload their CV, which is then analysed and scored by an AI model connected through the GPT API. Based on the resulting rating, the system can automatically move a qualifying candidate forward without manual HR intervention.
Tech Stack	Next.js React Tailwind CSS Framer Motion OpenAI GPT API
Key Features	- CV upload functionality for candidates - AI-powered CV analysis using the GPT API - Automatic candidate rating/scoring based on CV content - Automated email notification sent to candidates who meet the maximum/qualifying rating - Notification includes selection confirmation and an interview date - End-to-end hiring workflow automation with no manual steps required
What Makes It Different	The entire recruitment funnel screening, scoring, shortlisting, and interview scheduling notification runs automatically through AI, removing manual CV review from the hiring process entirely.

Rupense Tracker

Social expense-tracking mobile application

Overview	A mobile expense tracker that goes well beyond simple personal budgeting by adding a social layer letting users connect with friends, form groups, and automatically manage shared expenses and repayment reminders.
Tech Stack	Flutter Firebase Mobile App UI/UX Tracking
Key Features	• Unique-username-based friend search • Friend request system with send/accept flow • In-app messaging/chat between connected friends • Group creation adds friends into shared expense groups • Group expense ledger showing who paid whom, how much, what remains, and when it was paid • Automated reminder notifications if a payment is overdue, the system automatically messages the group reminding the responsible person to settle their share
What Makes It Different	It functions less like a basic expense logger and more like a social finance-accountability app (similar in spirit to Splitwise), with automated smart reminders that require no manual follow-up from the group.
Links	GitHub: github.com/mabdullahchaudhary/rupense-tracker

Developer Talks

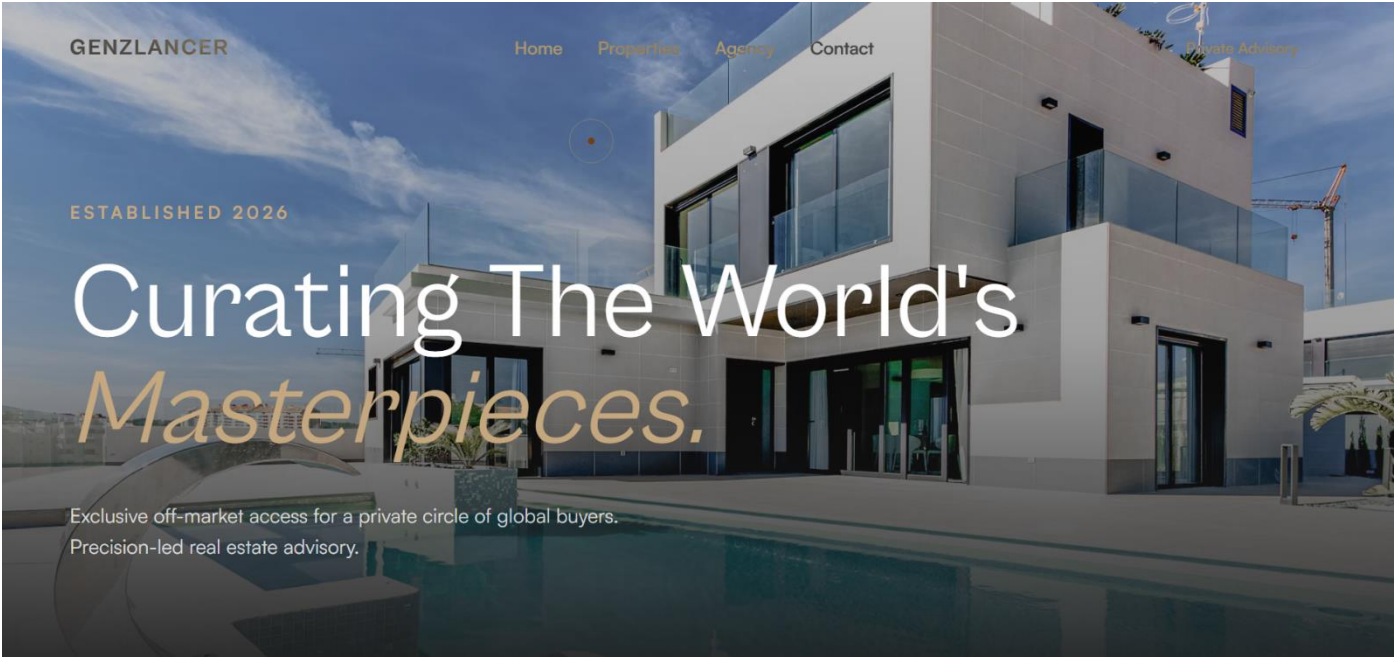

Social networking platform exclusively for developers

Overview	A niche social media mobile app built specifically for the developer community, enabling code sharing, peer guidance, and daily engagement through a gamified posting-streak system.
Tech Stack	Flutter Firebase Mobile App Content UI
Key Features	• Code and post sharing feed for developers • Direct messaging with image-sharing support • Peer guidance — developers can seek and give coding-related help • Friend request system (send/receive/accept) • Snapchat-style daily coding streak posting a coding-related update keeps the streak alive; missing a day breaks it
What Makes It Different	The gamified 'coding streak' mechanic is unique across the entire portfolio, turning consistent developer engagement into a habit-building feature rather than a passive social feed.
Links	GitHub: github.com/mabdullahchaudhary/app-project

ANS Real Estate

Single-page real estate landing site

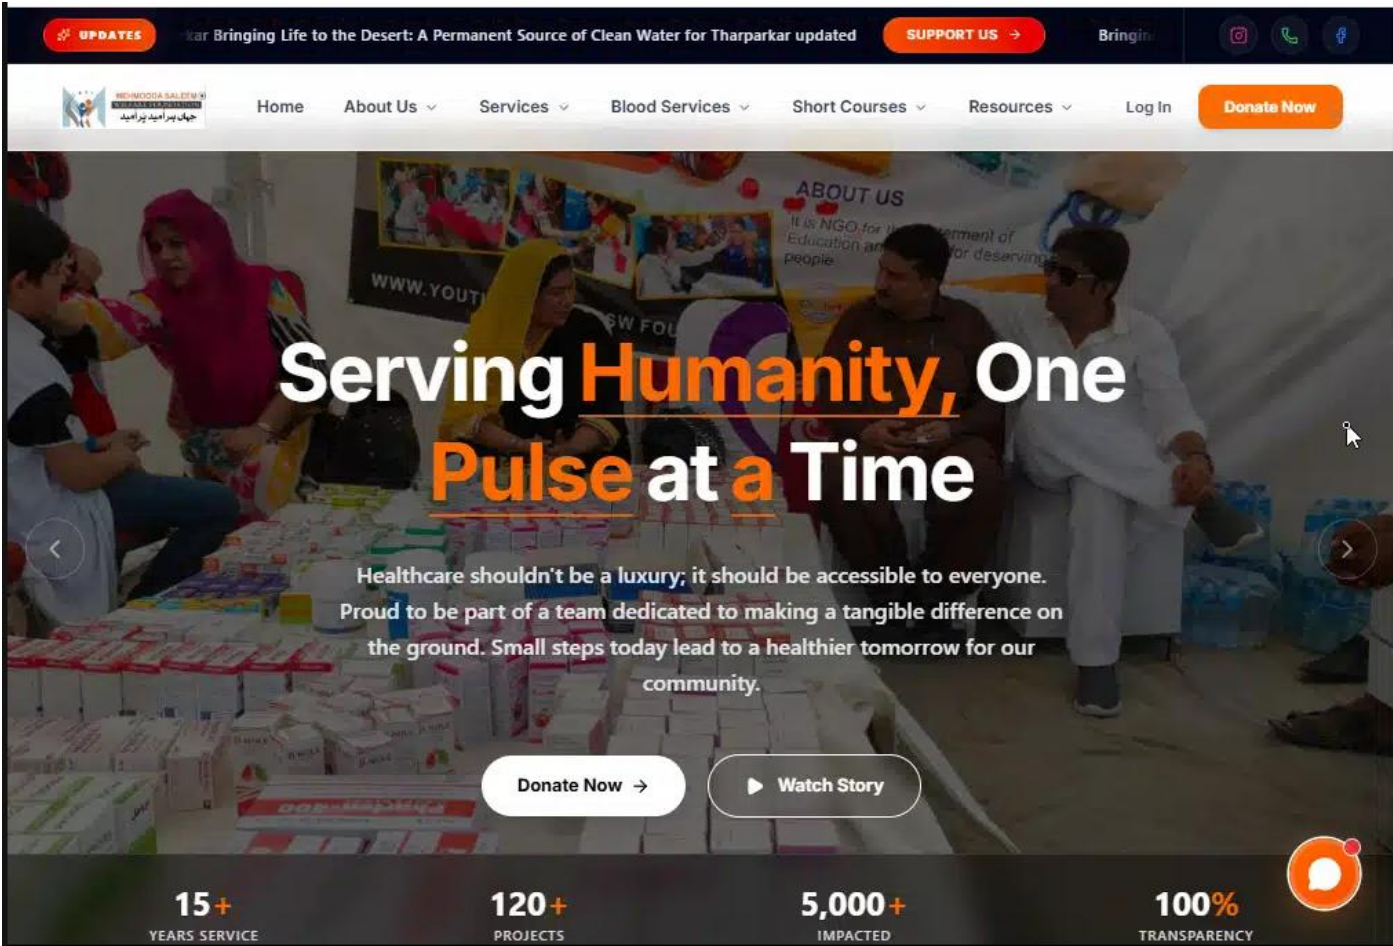

Overview	A simple, focused real estate landing page built to present property listings and brand information in a clean, lightweight format without any backend or dynamic data layer.
Tech Stack	HTML Tailwind CSS JavaScript
Key Features	• Single-page property/brand presentation layout • Fully responsive design using Tailwind CSS utility classes • Lightweight, static build with fast load times
What Makes It Different	The simplest project in the portfolio by design — a pure static HTML/Tailwind build with no framework or backend, useful for showing baseline front-end fundamentals alongside the more complex full-stack projects.

Mehmooda Saleem Welfare Foundation

Ngo Based website for collecting funds and updating data online

Overview	A clean, professional web presence for Mehmooda Saleem Welfare Foundation, built to highlight humanitarian efforts and manage donor information through a user-friendly interface.
Tech Stack	React Tailwind CSS TypeScript Framer PHP
Key Features	• Donor management system for tracking contributions. • Responsive, mission-driven UI design. • Optimized performance for accessibility and speed. • Seamless integration for impact storytelling.
What Makes It Different	Built specifically for non-profit objectives, this project balances complex data management (donor tracking) with a compassionate and clean front-end, proving the ability to tailor technical stacks for social-impact organizations.

Atif Anjum Portfolio

Ngo Based website for collecting funds and updating data online

Overview	A high-performance professional portfolio developed for a Senior Production & Quality Manager with 16+ years of industry experience. The site is designed to showcase operational expertise through a clean, data-driven layout that highlights career milestones and core competencies.
Tech Stack	Next.js Tailwind CSS Vercel (Deployment)
Key Features	• Dynamic, responsive layout optimized for professional branding. • Chronological career timeline for clear professional storytelling. • Modern UI components utilizing Tailwind CSS for a sleek, fast-loading experience. • Optimized for accessibility and fast performance on all devices.
What Makes It Different	Unlike standard project apps, this site focuses on "Operational Branding." It translates a heavy, text-based professional history into an engaging, interactive digital experience, demonstrating the ability to present complex career data in a visually compelling way.

Fly Ease Traveling

Online Travel Booking website

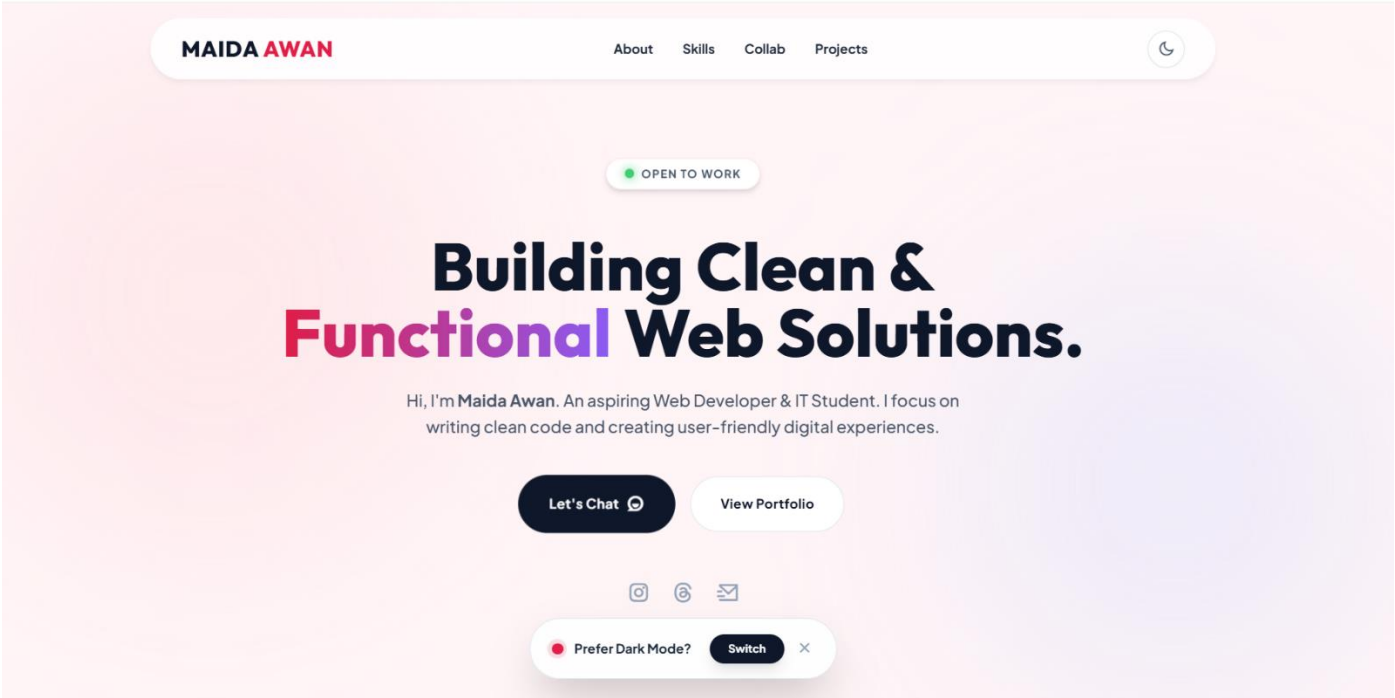

Overview	A comprehensive, high-traffic travel booking platform for FlyEase (UK), engineered to handle complex user queries and real-time travel search functionality. The platform is built for performance and scale, ensuring a seamless user experience from flight search to booking confirmation.
Tech Stack	React React Router Tailwind CSS Emotion Cloudflare CDN PHP
Key Features	- Interactive search interface for flight/hotel discovery. - Optimized, responsive design with high-performance asset loading via Cloudflare/Hostinger CDN. - Modular UI architecture for easy navigation across diverse travel services. - Fast-loading static components paired with dynamic routing for a smooth booking flow
What Makes It Different	This project demonstrates the ability to build data-intensive, consumer-facing platforms. By balancing complex UI requirements with high-speed performance optimization (HTTP/3, CDN delivery), the project showcases technical proficiency in creating scalable, enterprise-level web solutions that prioritize user engagement and conversion.

Maida Awan Portfolio

Portfolio for building online presence

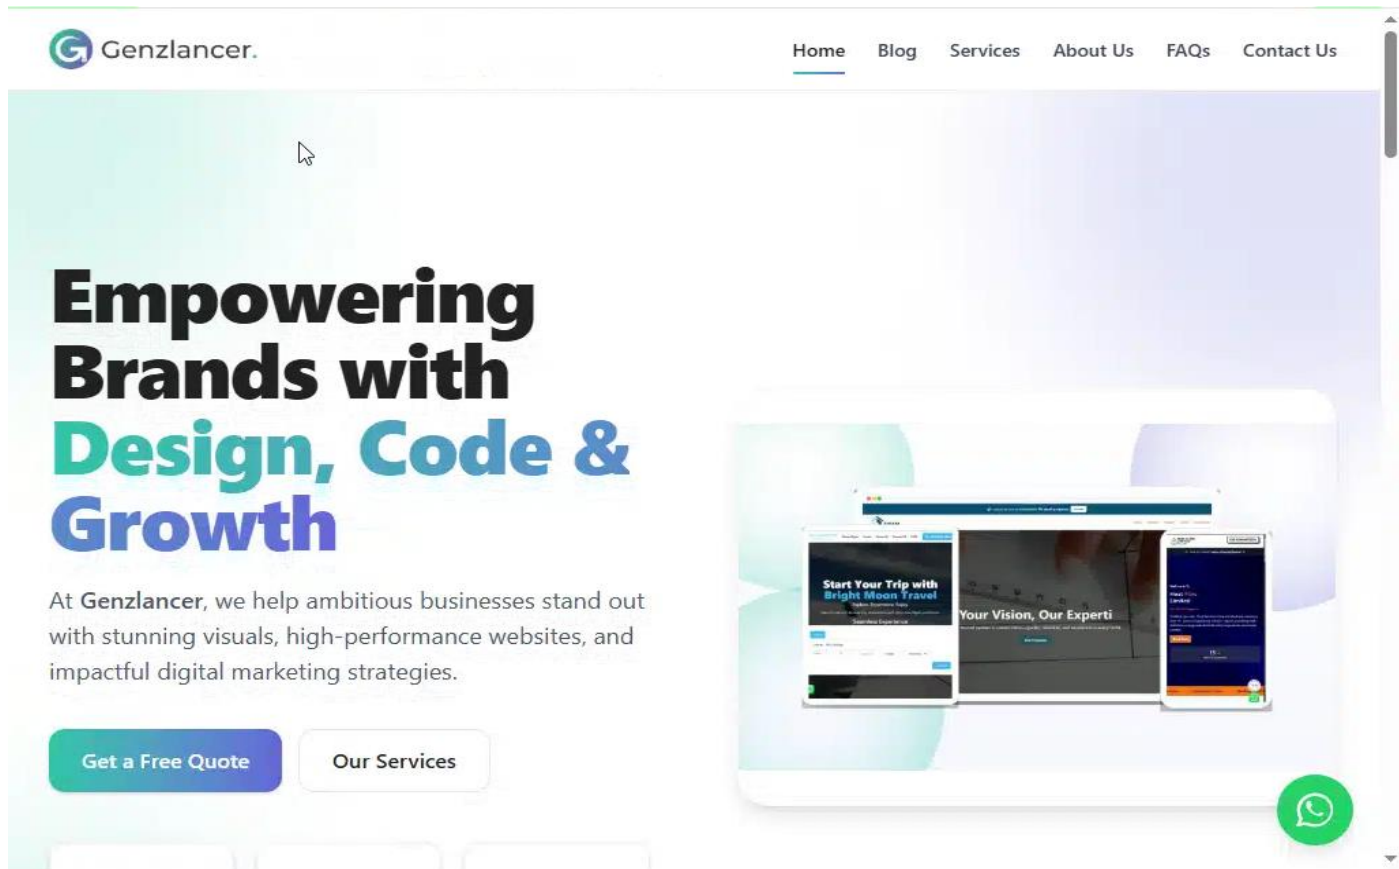

Overview	A personal professional portfolio for Maida Awan, designed to showcase a diverse technical foundation spanning web development, mobile applications, and IT infrastructure. The site emphasizes a clean, user-centric design that highlights academic achievements, technical projects, and collaborative leadership experience.
Tech Stack	HTML5 CSS3 JavaScript WordPress/WooCommerce Flutter (Mobile)
Key Features	• Interactive project showcase with filtering by technology (Web, Mobile, Console). • Integrated "Copy to Clipboard" functionality for professional communication. • Responsive layout featuring a modern dark/light mode toggle. • Chronological academic and leadership history for professional credibility.
What Makes It Different	This portfolio excels at bridging the gap between academic projects and real-world application. By integrating diverse technologies like WordPress, Flutter, and C++ into a single, cohesive narrative, it demonstrates both a broad technical range and a proactive, learner-first approach to software development.
Links	Live: maidaawan.vercel.app

Genzlancer Agency Website

Portfolio for building online presence

Overview	A robust digital agency platform for Genzlancer, engineered to serve as a high-conversion hub for diverse services including design, web development, and digital marketing. The site balances aesthetic appeal with high-performance architecture to support agency growth and client acquisition.
Tech Stack	React React Router Framer Motion Tailwind CSS Hostinger CDN (HTTP/3) Google Analytics (GA4)
Key Features	- Implemented Framer Motion for smooth, professional-grade animations and transitions. - Features a streamlined "Free Quote" workflow with integrated contact/service selection forms. - Optimized via Hostinger CDN and HTTP/3 protocols to ensure sub-second load times. - Built as a PWA with GA4 integration to track engagement and monitor marketing performance effectively.
What Makes It Different	Unlike a static portfolio, this project functions as a scalable agency engine. It demonstrates the ability to integrate complex third-party tools (Analytics, CDNs, PWA) while maintaining a high-end editorial feel that directly supports the business goal of high-conversion lead generation.
